

QUESTION: Describe the best projects you have worked on , including links if any .

The best project i have worked on recently is about how to “Design an eBay-like e-commerce auction site that will allow users to post auction listings, place bids on listings, comment on those listings, and add listings to a “watchlist”. This project was given from a course called CS50’s Web programming with Python and Javascript (CS50 Harvard course).Here they ask us to write a function for posting an auction and a watchlist . I had a great experience working on this project where I started with knowing nothing and learned how to create a perfect structure for an auction .
